<b>Patterns and Relations</b>				
<p>Model and solve problems using linear equations. (PR2, N7)</p>	<p>Solve simple equations by applying preservation of equality using concrete or pictorial representations</p> <p>Distinguish between an expression and an equation</p> <p>Evaluate an expression, given the value of the variable</p>	<p>Solve a variety of equations including integral values by applying preservation of equality using concrete or pictorial representations</p> <p>Verify the solution to an equation using substitution</p> <p>Write the equation for a simple problem, solve the equation and verify the solution</p>	<p>Use a symbolic approach to solve a variety of equations including integral values by applying preservation of equality and inverse operations</p> <p>Apply the distributive property to solve an equation</p> <p>Write the equation for a variety of problems, solve the equation and verify the solution</p>	<p>Apply preservation of equality, inverse operations and fluency with number to efficiently solve equations of all forms</p> <p>Write the equation for a complex problem, solve the equation and verify the solution</p>
